Completion Date: May X 2022

Revision Number: 1

Revision Date: May X, 2022

Goal

Using a sample wardrobe, we want to represent the concept of an outfit in the application. As a basis, we want to design a preliminary outfit generator that can generate outfits (without the learning aspect) for the user. With this base, we want the front end to process arbitrary outfits and display them on the screen along with the other items in the wardrobe. We also want to allow the user to calibrate our model by letting the user like/dislike a series of outfits and updating our recommendations accordingly.

Task listing, organized by user story

- A. **(Story Points: 21)** As a user I want to be able to calibrate the recommendation model so that it gives me outfits that fit my preference and learn what I like to wear for future recommendations. **(Priority: 1)**
- ☐ **Task 1:** Be able to present random outfits and allow the user to like, dislike, or skip outfits.
 - Time: 6 hours
 - ☐ **Task 2:** Feed the calibrated data to the recommender model, and update the model based on user preferences.
 - Time: 5 hours
- B. **(Story Points: 8)** As a user I want to be able to submit a picture of my clothing item so that when I receive a recommendation, I can easily identify which piece of clothing it is referred to and clearly visualize my outfit right on my phone screen. **(Priority: 2)**
- ☐ **Task 1:** Be able to present random outfits and allow the user to like, dislike, or skip outfits.
 - Time: 6 hours
 - ☐ **Task 2:** Feed the calibrated data to the recommender model, and update the model based on user preferences.
 - Time: 5 hours

SPRINT 3 PLAN

Team Roles

Matthew Daxner: Product Owner, Developer

Sanjay Shrikanth: Developer

Griffen Shu: SCRUM master, Developer

Arka Pal: Developer

Datchi K: Developer

Individual Task Assignments

Matthew Daxner: Story A: 1,2, Story B: 2

Sanjay Shrikanth: Story A: 1,2

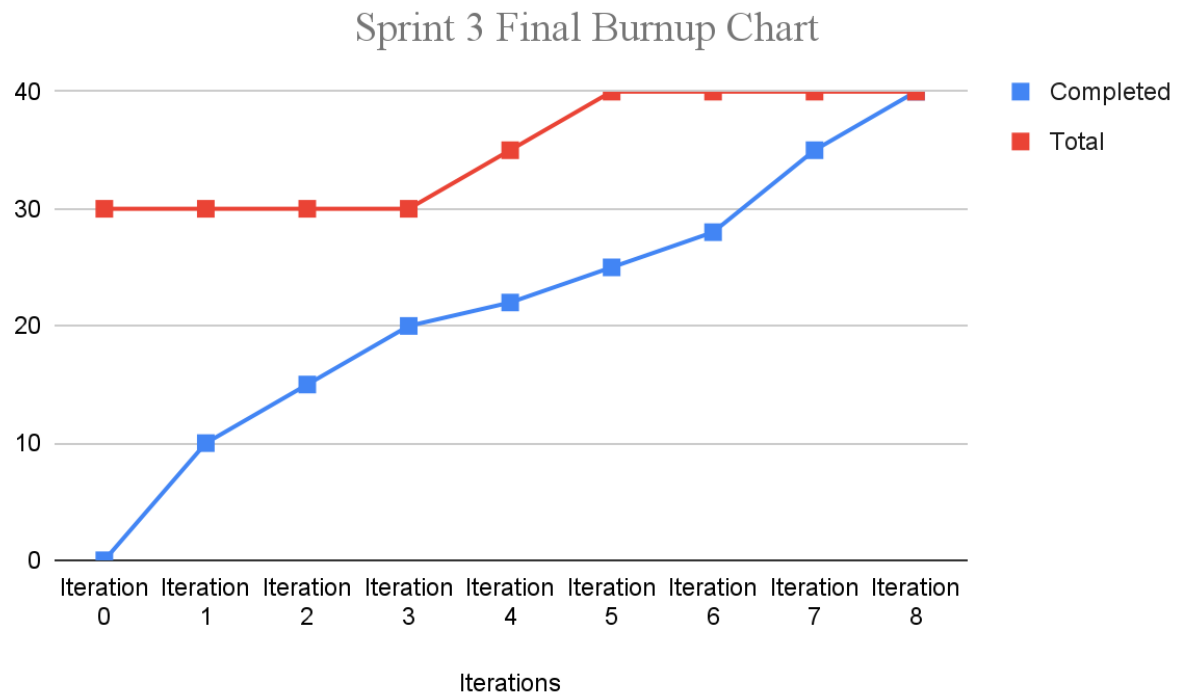

Griffen Shu: Story B: 1,2

Arka Pal: Story A: 1, Story B: 1,2

Datchi K: Story A: 1, Story B: 1
